

Create a Custom Report

Custom reports can be compiled by creating and collecting a series of tiles from the Explorer or InCites System Reports. These reports can be referenced and shared with colleagues, and updated with new or revised tiles at any time. As information needs change, so can your reports to respond to ad-hoc requests, reflect up-to-date data, and include new indicators.

Creating a custom report begins with creating a **Report** within the **My Folders** area, located in the header on the **Analytics** homepage.
